

Burning Sky

Original

Edited

Some absolutely stunning photos were taken at the beach in Florida. This one has the sun setting over the horizon, and it looks like the sky is burning. The sunset did some cool things to the clouds. The sun looked a little distant in this one, and that there was too much free area. Some people don't mind the human silhouettes, but a lot of people don't like that. Most of the meat and potatoes of this image was also towards the bottom. It was also massive at 56 inches by 42 inches and 72 ppi.

The photo was cropped quite a bit to capture the meat and potatoes of the image. In doing that, the rule of thirds was also set up by putting the sun at the bottom-right intersection and the top third line right above the black clouds. This also made an 8 by 6 inch image with a resolution of 200 ppi. Then more contrast was added the image was made a little brighter. Then the saturation was turned up to make the colors even more diverse. This gives Lion King energy.

Studious Doggo

Original

Edited

The photographer walked away from his homework and found out that his dog took over. He didn't know how long he had to take the picture before his dog walked away, so he took it quickly and hastily. The lighting was dim, and the camera wasn't warmed up, causing a grainy image. It didn't help that it was taken from a distance and zoomed in. This image didn't have a lot of contrast either. There was also a large water bottle blocking the back of the image and a lot of free space. The image was massive at 56 x 42 inches at 72 ppi.

After some editing, the image looked better. The burn tool was used to make the dog darker because she is fairly dark in reality. The dodge tool was used to make the cushion a little lighter and add some contrast. The water bottle and a lot of the free space was cropped out. Sharpness was turned up a bit to account for the graininess. Contrast was turned up and the curve was pulled up a little to account for the poor lighting. The final size was 4.2 x 3.7 inches with a resolution of 201.6

The Moon

Original

This was a photo of the moon taken from the band section at a high school football game. It was taken at 30x zoom and still came out clearer than expected. The only problems were that the moon came out smaller than expected, and it wasn't as bright as expected. Just like all the other images, this one came out massive at 42 x 56 inches and 72 ppi.

Edited

The photo was cropped to make a square canvas around the moon and remove excess free space. Not a ton was changed about the colors, but the brightness and contrast were turned up to show a brighter and clearer image. Changing the brightness would've taken away from the clarity, so that was avoided. The final size was 9 x 9 inches at 214 ppi.

French Toast

Original

A home cook made come beautiful golden french toast of only the finest ingredients. The photo taken of the french toast did not show very strong color because the room was too bright. There was also way too much free space and an unwanted object in the top left corner. The plate was way off to the left. The image was 42 x 56 inches at a resolution of 72 ppi.

Edited

The end result was amazing. The free area and unwanted object were cropped out helping the viewers to focus on the toast. That also helped center the plate. The vibrance and saturation were turned up to show the golden color of the french toast and make it look more appetising. Our final size was 8 x 6.4 inches at 180 ppi.
